Tsunami Buoy Calibration Standard Operating Procedure v1.0

Master Technical Procedure for Deep Ocean Seismic Buoy Array Maintenance

Generated: 8/22/2026 | Official Document

1. Sensor Calibration Routine

Bi-annual calibration of bottom pressure recorders (BPR) ensures sea level anomaly measurement precision within 1 millimeter tolerance.

2. Data Telemetry Verification

Acoustic modems transmit high-frequency sensor readings to surface buoys, broadcasting real-time data packets via satellite link.
