Coral Bleaching Watch & Thermal Stress Manual

Sea Surface Temperature (SST) Anomaly Analysis & Ecosystem Protection

Generated: 8/22/2026 | Official Document

1. Satellite Thermal Monitoring

Sea surface temperatures are continuously tracked via satellite radiometers to calculate Degree Heating Weeks (DHW) across marine coral sanctuaries.

2. Warning Level Classification

Level 1 Watch is triggered when SST exceeds 1.0 °C above monthly maximum mean climatology for more than 4 consecutive weeks.
